

DATA - BPC - BUSINESS PROCESS CO-PILOT

How to use Data - BPC

Data - BPC is the console that provisions the data connections an I-CUP engagement runs on, tracks the delivery journey, and hands over the deliverables. This guide walks the flow end to end.

1 SIGN IN

Pick a profile	On the first screen, choose Start Fresh Project to begin a new engagement, or open a saved Client project.
PIN to open	Saved client projects are gated. Enter the PIN 2 3 4 5 to open one. Start Fresh opens with no PIN.
Pick a role	Choose the role to sign in as. Access to pages depends on the role (below).

2 ROLES AND ACCESS

C-Level	Deliverables and Delivery Gantt only — the handover view.	Data Science	Full access to every layer, connections, and deliverables.
Delivery / PM	Journey, layers, deliverables, Gantt, and connections.	Admin	Everything, plus profile management (upload and delete).

3 SET UP SOURCES WITH THE FS DATA GENIE

Open the Genie	The FS Data Genie sits bottom-right. It walks the source groups one at a time in I → C → U order.
Pick what to connect	For each layer, select the sources in scope (ERP, CRM, databases, email, external). Continue through the layers.
Finish	On finish, the picks are provisioned as connections. Only the selected sources appear on the Connections page.

Already set up? If a project's sources are already gathered, the Genie says **Info gathered** and does not ask again.

4 CONNECTIONS AND TEST

Review endpoints	The Connections page lists each selected source with a prefilled endpoint, auth mode, and a secret reference (vault path / key name) — never a raw password.
Test connection	Open a source and hit Test connection . A green result shows ping time and the count of discovered objects, tables, or mailboxes.

Get to green

Every selected source must test green. The layer counter (e.g. 16/16) tracks progress.

5 THE JOURNEY UNLOCKS

Locked until ready I-CUP Journey and the layer pages stay **Locked** until all sources are connected. This keeps the backend from running on data it cannot pull.

Ready Once connections read **Ready**, the journey, layer detail pages, and analysis open.

6 DELIVERABLES AND GANTT

Deliverables The **Deliverables** page lists each output with its status. Delivered items have an **Open** button to view the report.

Delivery Gantt The **Delivery Gantt** shows phases and weeks across the engagement timeline.

7 SAVE AND MANAGE PROJECTS

Save as project While in Start Fresh, use the **Save as project** bar at the top to name and store the current session. It becomes a saved client project, carrying over the sources set up.

Delete a project On the login screen, use the trash icon on a client project and enter PIN **2 3 4 5** to delete it. Start Fresh cannot be deleted.

Admin upload An Admin can also upload a prepared client config JSON from the Admin page to add a fully-detailed profile.
