

PURPOSE & VALIDATION

Database and SSIS access confirmed; Agent scan pending

Six access points were reviewed. Connections to the SQL Server databases and the SSIS package network folder were established with no issues. Agent scanning of the SQL Server Agent instance and its flat-file inputs is pending on the production server.

DATABASE LANDSCAPE

Read access confirmed across 17 of 18 in-scope databases

Metadata captured via a direct catalog query against the production instance. All accessible databases are online, on SQL Server 2017 (compat level 140), SIMPLE recovery. Three databases hold ~86% of the ~6.9 TB footprint. SkySTRMPS is excluded (access not provided).

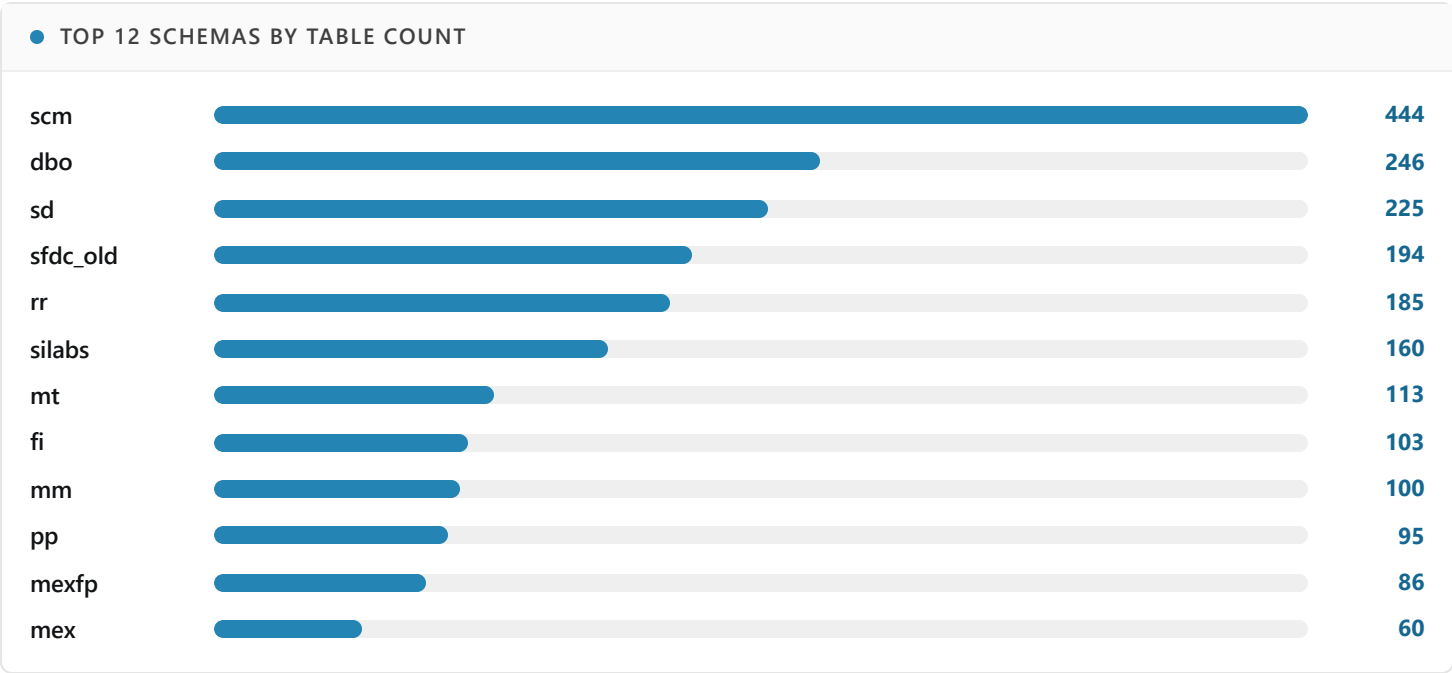

LIB_ECC_RTP ~2.6 TB Largest by raw size. SAP ECC real-time library. 551 TABLES 990 VIEWS 15 SCHEMAS	Skyworks_ODS ~2.0 TB The central operational hub. Largest schema and object count by far. 2,726 TABLES 2,099 VIEWS 65 SCHEMAS	Skyworks_WH ~1.2 TB The warehouse layer feeding downstream analytics and reporting. 1,044 TABLES 544 VIEWS 52 SCHEMAS

SKYWORKS_ODS

65 schemas, 2,726 tables in the central hub

Skyworks_ODS is the heart of the operational data store. Schema names map to functional domains. Top twelve by table count:

TOTAL SCHEMAS

65

TOTAL TABLES

2,726

REMAINING 53 SCHEMAS

715 tables

the long tail

SSIS PACKAGE LANDSCAPE

563 packages, organized by functional domain

The **SSISDeployment** network folder was reviewed directly. Correlation to SQL Server Agent job steps is pending, as Agent scanning on the production server is being sequenced.

UNIQUE .DTSX PACKAGES

563

· excl. Clone/backup

JOB STEPS RUNNING SSIS

LARGEST DEPLOYMENT SUBDIRECTORIES BY PACKAGE COUNT

JDA\SOM

102 packages

Skyworks_ODS\sd

75 packages

JDA\MEXFP

57 packages

Skyworks_ODS\scm

45 packages

CLONE SUBFOLDERS EXCLUDED

A small number of packages reside in Clone subfolders (**Skyworks_ODS\rr** and **Skyworks_ODS\scm**); these are excluded from the 563 count.

JOB-STEP CORRELATION PENDING

Mapping packages to active job steps and flat-file references requires SQL Server Agent scanning, which is being sequenced with the Skyworks team.

SQL SERVER AGENT · JOB INVENTORY

Agent job inventory sequenced with the Skyworks team

The Agent resides on a separate production instance to which access has been granted. In the interest of using production resources judiciously, the job-history and step-level review is being sequenced. The metrics below are reported once that review completes.

TOTAL AGENT JOBS Pending	ACTIVE / INACTIVE SPLIT Pending	JOBS W/ SSIS DEPENDENCY Pending	SSIS PKGS IN DEPENDENT JOBS Pending
SSIS PKGS FOUND (NETWORK) Pending	SSIS PKGS USED BUT MISSING Pending	PACKAGE-TO-JOB CORRELATION Pending	LEGACY FOOTPRINT Pending

Once Agent-level review completes, this section will report the active/inactive job split, SSIS execution dependencies, and legacy footprint, consistent with the QA-phase analysis.

OBSERVATIONS & CONSIDERATIONS

Four considerations carried into the next workstreams

~6.9 TB
DATA VOLUME

THREE DATABASES HOLD ~86% OF VOLUME

LIB_ECC_RTP (~2.6 TB), **Skyworks_ODS (~2.0 TB)**, and **Skyworks_WH (~1.2 TB)** dominate the ~6.9 TB footprint across the 17 accessible databases. Profiling effort concentrates here.

Pending
FLAT FILE DEPS

INPUTS THAT LIVE OUTSIDE THE SQL CATALOG

Flat-file dependency counts require correlation with SQL Server Agent job steps, since Agent scanning of the production instance is pending. These upstream inputs are inventoried once that scan completes.

1:N
PACKAGE REUSE

ONE PACKAGE, MANY LOGICAL FLOWS

Several packages are expected to follow the parameterized reuse pattern seen in QA: the same .dtsx invoked by multiple jobs with different runtime parameters (plant code, environment, date range). To be confirmed once job-step data is available.

Pending
LEGACY JOBS

ACTIVE / INACTIVE SPLIT NOT YET MEASURED

The active/inactive job split for production is pending. Based on the QA-phase pattern, a meaningful legacy footprint is anticipated and will be assessed once Agent access review completes.

— NEXT STEPS

Engagement proceeds to concurrent workstreams

Connectivity to the provided production systems is validated. Two workstreams now run in parallel.

D2

ODS Metadata Inventory

✓

Build the metadata inventory across the in-scope databases.

✓

Catalog tables, views, procs, and schemas for lineage.

IN PROGRESS

SSIS Package Parsing

✓

Parse the 563 .dtsx packages.

✓

Correlate packages to Agent job steps and flat-file references once Agent scanning completes.

DELIVERABLE 1 · COMPLETE

Connectivity validated, assessment underway

Prepared by Findability Sciences as part of the Skyworks Solutions ODS Assessment engagement. Read access is confirmed across the accessible in-scope databases, and the SSIS package landscape has been catalogued. SQL Server Agent scanning on the production instance is being sequenced. The engagement now proceeds to metadata inventory and package parsing.
